

# Aviation Risk Management

**AEROSAFE**  
RISK MANAGEMENT

If you are looking for a course that anyone in your organisation at any level can benefit from then this is the course for you. Within the CASA Safety Management System (SMS) risk management is acknowledged as the key.

This course teaches participants the risk management process as it applies in the aviation industry. Although it is primarily used to manage safety risks, the process can be applied to the business and operational aspects of the company.

Based on the Australian New Zealand Standard for risk management 4360, this course provides the tools, techniques and methods needed to identify, assess and control risk.

The aviation industry has long been key supporters of managing risk – it is part of day to day business. The material covered in this course leverages off this experience and provides the framework and structure required to formalize this process.

This course will teach participants how to conduct a risk assessment and will present a model for how to apply the risk management process to aviation operations. It caters for all risk areas within the aviation industry including safety, reputation, operations, security, engineering, and the environment.

## Designed For
